EXPERIENCE

Chief Technology Officer (CTO) - JD Telecommunication (Isabela, Philippines)

Aug 2021 - June 2025

As Chief Technology Officer, I led the full development and deployment of a complete ISP billing and infrastructure system now actively used by real ISP companies, currently processing over ₱220,000 in weekly collections. I designed and implemented the entire technical stack, including the setup of Ubuntu-based servers, MikroTik and Ubiquiti hardware, LTE routers, and TR-069 provisioning using GenieACS. On the software side, I developed a custom Flutter-based field collector app with offline support, Bluetooth receipt printing, and town-based access control, fully integrated with a Google Sheets backend via Google Apps Script for real-time billing and updates. I also managed system monitoring through IoT dashboards and remote device tracking. Beyond development, I led a small technical team, oversaw QA and architecture decisions, and began exploring AI automation for network optimization and billing intelligence. This system is not a prototype it is a deployed, revenue-generating platform that solves real operational challenges for rural ISPs.

Odoo CRM & E-commerce/Website Builder Specialist (Company Hidden, AU)

Jan 2023 - Sept 2024

Implemented and customized Odoo CRM to streamline lead management, sales pipeline tracking, and customer follow-ups, improving sales team efficiency by ~25%. Designed and deployed Odoo E-commerce websites with integrated payment gateways, shipping methods, and product catalogs, enabling businesses to expand online sales.

Developed custom workflows and automation rules within Odoo CRM for lead scoring, follow-ups, and email campaigns, reducing manual workload.

Senior Game Developer & AI Integrator – REEV Tech Inc. (Japan) [Remote] Unity 2D/3D/VR | Flutter | Kotlin

January 2022 - May 2025

At REEV Tech Inc., a Japan-based tech company, I served as a Senior Game Developer and AI Integrator, specializing in Unity development for 2D, 3D, and VR applications. I contributed to immersive, interactive software

SKILLS

Programming Languages & Frameworks:

- JavaScript (ES6+), TypeScript
- Dart, Kotlin, Java
- PHP, Ruby, Python
- HTML5, CSS3, Tailwind CSS
- Node.js, Express.js
- Ruby on Rails
- Next.js, React.js, Angular

Full-Stack Development:

- MEAN Stack (MongoDB, Express, Angular, Node.js)
- MERN Stack (MongoDB, Express, React, Node.js)
- LAMP Stack (Linux, Apache, MySQL, PHP)
- RESTful APIs & Microservices
- Authentication (JWT, OAuth2)

Game & App Development:

- Unity (2D, 3D, VR)
- Flutter (Cross-platform)
- Android (Kotlin, Java)
- Firebase, Supabase, Hive, SQLite

Web Development:

- WordPress Development

solutions by collaborating closely with the Japanese team to deliver high-performance, visually engaging projects. I spearheaded the development of **realistic AI-powered NPCs**, integrating **OpenAI's GPT-based APIs** with Unity to enable natural dialogue, context-aware behavior, and adaptive in-game interactions. My work also included supporting **cross-platform mobile development** using **Flutter** and **Kotlin**, ensuring seamless performance on both Android and iOS. This role demanded strong communication skills, time management, and a self-driven approach to consistently deliver results across time zones.

Full-Stack & WordPress Developer at Yazilim Mashoor (Turkey) | PHP | Tailwind CSS | JavaScript | MySQL

February 2023 - May 2025

Currently working remotely with **Yazilim Mashoor**, a tech company based in **Turkey**, where I serve as a full-stack developer with a focus on custom **WordPress** development. My responsibilities include building and maintaining dynamic eCommerce websites using **PHP**, **Tailwind CSS**, and **MySQL**, while also implementing interactive front-end features with **JavaScript**. I contribute to both backend and frontend architecture, ensuring **responsive**, **scalable**, and **SEO-friendly** web solutions. My role demands clear collaboration across international teams, adherence to project timelines, and a keen eye for user experience and performance optimization.

Freelance Software Developer | Unity 2D/3D/VR | Flutter | Kotlin | Web Development

2016 - PRESENT

A freelance developer, I design and build a wide range of digital solutions for clients locally and internationally. My expertise spans Unity development for 2D, 3D, and VR projects, mobile app development using Flutter and Kotlin, and full-stack web development with PHP, JavaScript, and modern frameworks like Tailwind CSS. I've created games, mobile apps, and eCommerce platforms, adapting to each client's unique goals. My freelance work has honed my ability to manage projects independently, communicate effectively with diverse teams, and deliver high-quality results under tight deadlines.

PROJECTS

AskWise AI — OpenAI GPT-3.5, Firebase, Flutter, Dart

Built a real-time, conversational AI chatbot using OpenAI's GPT models integrated with Firebase for seamless user interactions. Enabled natural language understanding to answer user queries efficiently.

(Themes, Plugins, Custom Post Types)

- eCommerce (WooCommerce, Custom Solutions)
- Responsive & Mobile-First Design
- CMS Integration & Customization

Database & Cloud:

- MongoDB, MySQL, PostgreSQL
- Firebase, Supabase
- AWS (EC2, S3, Lambda – basic usage)

Tools & DevOps:

- Git, GitHub, GitLab
- Docker (basic)
- Postman, Insomnia
- VS Code, Android Studio, NetBeans, XAMPP
- Agile & Scrum Methodologies

AWARDS

Hackathon Champion
(PHIINMA University of Pangasinan – 2024)

Customer Support Chatbot — *OpenAI GPT API, Google Sheets API, Node.js, Express.js*

Developed an LLM-driven chatbot with dynamic knowledge base updates via Google Sheets API, automating responses to frequently asked questions and reducing support load.

Content Generation Tool — *OpenAI, React.js, Tailwind CSS, Firebase Auth*

Created an AI assistant capable of generating marketing copy, blog posts, and social media content by fine-tuning prompts and templates to meet client brand voice needs.

AI-Powered Code Helper — *GPT-4 API, Flask, Bootstrap, JavaScript*

Developed a coding assistant tool to generate, explain, and debug code snippets in multiple languages using LLM APIs, enhancing developer productivity.

Sentiment Analysis Dashboard — *Transformers (HuggingFace), Python, Streamlit, Pandas*

Built an NLP-based dashboard utilizing LLMs to analyze customer feedback and social media comments, providing actionable insights to improve product and service quality.

IntelliDoc: AI-Powered Document Parsing & Classification System — *OCR | NLP | FastAPI | MongoDB | React | AI pipeline*

Built an AI-based platform to parse, classify, and extract structured data from scanned or handwritten documents using OCR and NLP.

BillWise: Full-Stack SaaS for Client Invoicing & Payments — *Next.js | Node.js | PostgreSQL | Stripe | SaaS | Docker | CI/CD*

Developed a scalable SaaS app with subscription plans, PDF invoice generation, Stripe integration, and automated email notifications.

ChatFusion: Realtime Messaging App with AI-Powered Smart Assistant — *React Native | Firebase | Supabase | GPT-4 | WebSockets | offline sync*

Engineered a cross-platform mobile chat app with AI assistant support for summarizing and suggesting messages using OpenAI API.

IoTFlow: Real-Time Device Monitoring and Control Dashboard — *MQTT | Node.js | InfluxDB | Grafana | WebSockets | React*

Designed an IoT dashboard with live sensor updates, alerting, historical data visualization, and device configuration.

JobMate AI: Smart Resume Matcher & Candidate Ranking System — *Django REST| GPT-4 API| PostgreSQL| Elasticsearch| NLP*

Built a job platform that parses resumes, recommends jobs, and ranks candidates using AI-driven semantic search and NLP.

SiteForge: Multi-Tenant CMS with Role-Based Access Control — *Laravel/NestJS| MySQL| Vue.js/Next.js| Redis| RBAC| multi-tenancy*

Built a microservice-based e-commerce system with individual services for auth, product, orders, and payments, using Kafka and Kubernetes.

ShopGrid: Dockerized Microservices E-Commerce Platform — *Go/Node.js| Kafka| PostgreSQL| Redis| React| Kubernetes| microservices*

Built a microservice-based e-commerce system with individual services for auth, product, orders, and payments, using Kafka and Kubernetes.

Automated Document Summarizer — *LangChain, OpenAI GPT, Firebase, Vue.js*

Designed a summarization system using LLMs to extract key information and generate concise summaries from lengthy documents, improving review efficiency.

Through Wilderness — *Unity | 2D Pixel Art | Roguelike | MySQL, SQLite, Unity Persistent Data*

A 2D roguelike pixel-art game built in Unity, featuring procedural generation, multiple enemy types, and interactive items. Integrated three-tiered data systems for cloud (MySQL), local (SQLite), and device (Unity persistent data) storage to ensure seamless game progress tracking.

Unbound Soul — *Unity | 2D Adventure Platformer | Narrative-Driven | Retro Pixel Style*

Designed and developed a 2D story-rich platformer game with character upgrades, puzzle mechanics, and a pixel-art retro aesthetic. Focused on atmospheric storytelling, smooth movement physics, and interactive cutscenes.

Elder Quest — *Unity | 2D Top-Down RPG | Inventory System | Quest Engine*

Built a classic 2D top-down RPG with turn-based combat, a dynamic inventory system, and an expandable quest framework. Emphasized smooth UI, character progression, and layered map design reminiscent of

old-school RPGs.

Retro GTA — *Unity* | *3D Third-Person Action* | *Retro Style* | *VR & First-Person Mode*

Developed a 3D open-world game inspired by classic GTA titles, featuring a stylized retro visual theme. Players can switch between third-person and immersive first-person VR modes. The game includes vehicle mechanics, combat systems, AI-driven police with a wanted level system, and mission-based progression, designed to deliver an old-school GTA experience with modern controls and VR support.

Vendi App — *Flutter* | *Kotlin* | *Firebase* | *Supabase* | *MongoDB* | *Android & Backend Dev*

Developed a vendor booking and communication app with real-time messaging, map-based service discovery, and role-based access (admin, vendor, user). Built with Flutter (frontend), Kotlin (Android integration), and a backend powered by Firebase, Supabase, and MongoDB.

Vendi App — *Flutter* | *Kotlin* | *Firebase* | *Supabase* | *MongoDB* | *Android & Backend Dev*

Developed a vendor booking and communication app with real-time messaging, map-based service discovery, and role-based access (admin, vendor, user). Built with Flutter (frontend), Kotlin (Android integration), and a backend powered by Firebase, Supabase, and MongoDB.
